WATCHMAKING COMPETENCE CENTER

PERFORMANCE AT THE HEART OF INDUSTRIAL EXCELLENCE
MASTERFUL PRODUCTION GUARANTEEING QUALITY AND INNOVATION

Victorinox Swiss Army is celebrating the future and marking a key stage in its development with the creation of a Watchmaking Competence Center and the integration of watch-case production. In 2016 we saw the completion of a project that has spanned more than three years, representing an investment of 38 million Swiss francs and bearing witness to the brand's ambitious vision. In Delémont, the capital of the Swiss Jura, the Victorinox Swiss Army Watchmaking Competence Center preserves and develops precious Swiss expertise.

The quality and excellence that have characterized Victorinox knives since their creation in 1884 are also channeled into Victorinox Swiss Army watches.

The Competence Center combines performance and technology, bringing together two towering symbols of Swiss industry: knifemaking and watchmaking. The historic building has been enlarged by two new factories, which were built to house the Victorinox Swiss Army watchmaking competence center and the brand's international head office.

The Victorinox name has enjoyed great renown for over a century, thanks to its expertise and mastery of industrial skills and steel industrialization processes. This know-how has since been transposed

to watchmaking. As part of a logical brand evolution and transfer of skills, Victorinox Swiss Army watch cases are now produced in Delémont. This is a key stage and a historic, symbolic step that attests to the brand's desire to increase the added value of the "Swiss made" label, taking it well beyond its own standards.

A high-tech production center employing modernized methods brings together every stage of the machining, assembly and finishing processes. A symbol of its innovation, the extreme testing laboratory is an experimental platform where the I.N.O.X. watch successfully completed a battery of 130 tests, elevating it to the rank of an all-enduring timepiece.

Committed to significantly reducing its environmental footprint, the site ensures the efficient management of both energy and waste.

ALEXANDER M. BENNOUNA
CEO, Victorinox Swiss Army SA

HISTORY

THE SPIRIT OF INNOVATION & SUSTAINABILITY

RESPONSIBLY MEETING THE NEEDS OF THE PRESENT – AND ENSURING THAT FUTURE GENERATIONS WILL BE ABLE TO MEET THEIRS – REQUIRES INNOVATIVE THINKING ON AN UNPRECEDENTED SCALE. ROBUSTNESS, DURABILITY AND QUALITY ARE THE KEY REQUISITES.

1884

Karl Elsener opens a cutlery workshop in Ibach, in the Canton of Schwyz, with the support of his mother Victoria.

1891

Initiated by Karl Elsener, the Swiss Cutlery Union is founded. Karl Elsener and his co-workers deliver soldier's knives to the Swiss Army for the first time.

1897

The name "Swiss Officer's and Sport Knife" is legally protected on June 12. This model later becomes known around the world as the "Original Swiss Army Knife."

1909

Following the death of his mother, Karl Elsener introduces the brand name "Victoria" in her honor.

The company's founder legally registers the distinctive emblem with the cross and shield as a trademark. It is now a registered trademark in more than 120 countries.

1921

The invention of stainless steel being of central importance for the cutlery industry, Karl Elsener coins the company's new name, "Victorinox," by combining his mother's name "Victoria" with "Inox."

(Inox is an abbreviation of the French word "inoxydable," which means stainless.)

1931

The Brown Boveri Company sets up the world's first fully electric heat treatment facility for Victorinox.

1945

The "Original Swiss Army Knife" begins its successful progression around the world and is particularly popular in US Army PX stores.

1979

On January 2, the previously solely owned "Messerfabrik Carl Elsener" is converted to the family-owned company "Victorinox AG."

1984

The company doubles the size of its plant and office space with 810 employees generating revenue of more than CHF 80 million.

1989

Victorinox's American distribution partner enters the timepiece market in the USA under the "Swiss Army Brands, Inc." label and launches the brand's first watch collection produced in Biel, Switzerland.

1992

The company opens its own sales subsidiary in Japan. Further subsidiaries follow in subsequent years.

1999

Victorinox enters the travel gear market, issuing a manufacturing license to the American TRG Group in St. Louis.

Expanding its timepiece business, the company establishes Victorinox Watch SA in Bonfol, in Switzerland's Jura watchmaking region.

2000

The Victorinox Foundation is set up. It holds 85% of the shares in Victorinox AG. A further 15% are held by the charitable Carl and Elise Elsener-Gut Foundation.

2001

Victorinox apparel is introduced in the USA.

The first Victorinox Flagship store opens its doors to the public in New York's trendy SoHo district.

2002

The publicly traded US distribution partner Swiss Army Brands Inc. is privatized.

The timepiece brand Victorinox Swiss Army is launched internationally.

2003

Victorinox takes over the US company Wenger NA, including the fragrance label "Swiss Army Fragrance."

2005

Victorinox takes over the traditional Swiss cutlery and watch manufacturer Wenger SA in Delémont in the Swiss Jura.

2006

Victorinox Swiss Army moves to its new watch production facility in Porrentruy, in the Swiss Jura, to meet increasing demand and to ensure high-quality timepieces.

2007

Victorinox sets up Victorinox Swiss Army Fragrance AG based at its head office. The former Wenger fragrance line is repositioned in the market and is branded with the Victorinox emblem.

2008

The company's first European Flagship store opens on London's New Bond Street.

2009

Geneva City hosts the first Victorinox Flagship store in Switzerland.

125 years after its foundation, Victorinox now employs more than 1,800 people worldwide and generates revenues of around CHF 500 million.

2012

Launch of the first Victorinox Global Brand Campaign.

2014

To celebrate the brand's 130th anniversary and the watch division's 25th anniversary, Victorinox Swiss Army launches I.N.O.X. Designed and built to withstand unusual levels of stress, this watch has passed a battery of 130 tests certifying that it is "forged to resist."

2015

Victorinox Swiss Army moves to its new Watchmaking Competence Center in Delémont in the Swiss Jura.

2016

Inauguration of the watch case production facility in Delémont.

BRAND VALUES

EACH VICTORINOX SWISS ARMY WATCH EMBODIES THE SPIRIT OF THE LEGENDARY ORIGINAL SWISS ARMY KNIFE, A UNIVERSAL SYMBOL OF FUNCTIONALITY, INNOVATION, QUALITY AND ICONIC DESIGN.

QUALITY

Victorinox Swiss Army produces its watches in its own workshops based on criteria that emphasize technical performance, so as to optimize usefulness and practicality. They meet the highest standards of the Swiss watchmaking industry. Before leaving the facility, each watch is certified after undergoing a battery of at least 100 tests. Among the most important tests are water resistance, temperature, corrosion, UV, traction and torsion, vibration and shock resistance, aging and wear. In addition to this long control process, they are visually inspected between each manufacturing step. For these reasons, Victorinox Swiss Army watches have a three-year warranty. They are genuine precision instruments, modern and timeless in design, and built to last.

FUNCTIONALITY

All Victorinox Swiss Army watches are designed for maximum utility. Functionality is a focus for every aspect

of the timepiece, from the dial, which should be easy to read, to the most sophisticated professional functions. All design details are based on their practical application. Functions are never mere additions or embellishments.

INNOVATION

The objective of Victorinox Swiss Army is to enrich its collections regularly with new design elements and innovative features, while seeking creative solutions for the updates of existing components.

ICONIC DESIGN

Victorinox Swiss Army watches are inspired by the Original Swiss Army Knife, which has become, over many decades, one of the world's most recognizable objects of functional design. Sharing the same source of inspiration, both the watch and the knife symbolize the union between the history of Victorinox and its contemporary interpretations.

3-YEAR WARRANTY

A minimum of 100 quality control tests allow Victorinox Swiss Army to offer a 3-year warranty!

I.N.O.X.

The I.N.O.X. collection is engineered to endure a truly adventurous life. I.N.O.X. watches can handle extreme conditions such as a fall of 10 meters, being driven over by a 64-ton tank or a dive down to 200 meters. They are also designed to please the eye. Day or night, in the office or on a mountain, nothing beats the durable, versatile look of the I.N.O.X. collection.

Extendable rubber strap

I.N.O.X. PROFESSIONAL DIVER

Victorinox Swiss Army created a battery of 130 tests developed specifically for its diving watch. To define this list of customized tests, Victorinox Swiss Army focused on the criteria of the NIHS 92-11 standard, the needs expressed by diving-watch users and some of the existing criteria for the I.N.O.X. watch.

► Resists dives to depths of at least 200 m (660 ft), whereas the NIHS 92-11 standard requires just 100 m (330 ft).

► Features a unidirectional rotating bezel, which only turns in the direction that suggests you are running out of air.

► The indications on the dial are visible from up to 10 inches away in underwater darkness; the bezel marker and minute hand feature a blue luminescent coating – the easiest color to read in the ocean depths.

► The second hand is equipped with a luminescent dot, which enables divers to check at a glance that the watch is working properly underwater.

The I.N.O.X. Professional Diver also passed all the control tests required by the ISO 6425 standard, which notably demands resistance to thermal shocks and elevated water pressure, and the absence of condensation.

To meet the real needs of divers, Victorinox Swiss Army has also fitted its watch with:

► Anti-magnetic protection (ISO 764).

► Removable bumper that allows the rotating bezel to be immobilized during dives and improves the readability of the dial, thanks to its domed shape and magnifying-glass effect.

WHY IS THIS BRACELET UNIQUE?

- Able to withstand the same 130 tests previous I.N.O.X. models were put through
- Removal of metal blades allows for extreme comfort
- Includes security closure as an added precaution
- H-shaped links provide a highly resistant structure
- High value: unique buckle exclusively developed for I.N.O.X. by a renowned Swiss buckle manufacturer
- Bracelet designed to lay completely flat when clasp is undone in order to resist 8 tons of constant pressure
- Edges of links are cut and polished to match case; the matte and polished finish gives dimension

HOW TO USE IT

1. DIAL ILLUMINATION MODE

Press the light-functions pusher to activate the colored LED, which will glow for 6 seconds.

Changing the color of the LED

When Dial Illumination Mode is activated, press and hold the light-functions pusher for 3 seconds to access color options. Press the light-functions pusher to navigate between the 8 possible colors.

Press and hold the light-functions pusher for 3 seconds to select the desired color.

2. EXTENDED LIGHT MODE

Press the light-functions pusher twice in quick succession to activate the white LED.

3. SIGNAL MODE

Press the light-functions pusher three times in quick succession to activate the white LED, which will flash at 150 flashes/min. for 2 minutes.

4. SOS SIGNAL MODE

Press and hold the light-functions pusher for 5 seconds to activate an intensified SOS light signal. Repeat to deactivate.

5. LOCATOR MODE

Press the light-functions pusher five times in quick succession to activate the red LED location beacon, which will flash once every 10 seconds. Repeat to deactivate.

6. BATTERY END-OF-LIFE MODE (EOL)

The red LED locator beacon, positioned at the 6 o'clock marker, will flash 3 times every 10 seconds to indicate that the lighting battery needs to be replaced.

Note: The deactivation of the Locator Mode (point 5) does not have any impact on the Battery End-of-Life Mode.

INFANTRY

If you're a traveler, the whole world is your home. With this spirit in mind, we built the Infantry collection. Every design element is imbued with elegant simplicity and contributes to the maximum readability of the dial. So wherever your next adventure takes you, you're never out of place and always right on time.

INFANTRY

COLLECTION'S TECHNICAL SPECIFICATIONS

Swiss Made

CASE

- Ø 40 mm
- Stainless steel case (316L)
- Scratch-resistant, triple-coated anti-reflective sapphire crystal
- Water resistant to 100 m (10 ATM, 330 ft)
- Screw-in caseback
- Crown protection

DIAL

- Luminescent hands and numerals
- Date calendar

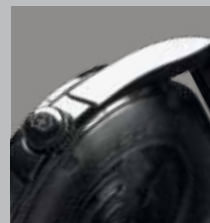

COLLECTION'S KEY FOCUS POINTS

Extra-thick sapphire crystal

Leather buckle cover for absolute wearing comfort*

Crown protection inspired by the shape of the Swiss Army Knife's blade

Embossed military time*

AIRBOSS

With reliability and precision in mind, we created the Airboss collection. It's inspired by the actual Air Boss, the countdown commander of an aircraft carrier. He decides every takeoff and landing time, a task requiring pinpoint accuracy. And that's exactly what you can expect from your Airboss watch.

AIRBOSS

ALPNACH

The Alpach collection pays tribute to the Swiss Army's legendary Cougar AS 532 helicopters, which are stationed in the mountain village of Alpach in the heart of Switzerland. The collection's design features elements borrowed from the Cougar itself. And like the Cougar pilots, you'll enjoy relying on the Alpach every day.

QUALITY

VICTORINOX SWISS ARMY WATCHES ARE COVERED BY A 3-YEAR LIMITED WARRANTY, WHICH IS ABOVE THE INDUSTRY AVERAGE. THE REASON WE CAN PROVIDE THIS EXTENDED WARRANTY IS THANKS TO THE THOROUGH PROCESSES PUT IN PLACE BY OUR QUALITY TEAM. VICTORINOX SWISS ARMY WATCHES GO THROUGH RIGOROUS TESTING AND SEVERAL QUALITY CONTROLS BEFORE BEING DISTRIBUTED.

The Quality Team and equipment fully comply with the European ISO standards and the Federation of the Swiss Watch Industry standards (NIHS). Our team also has its own standards and internal tests. During each production phase, quality “filters” – specific members of the Quality Team – control each step. Their extensive

certification controls continue until delivery. Victorinox Swiss Army also certifies each component brought in from external suppliers. The Victorinox Swiss Army Quality Team conducts at least 100 tests before certifying a design. Here is a list of the most important tests Victorinox Swiss Army watches undergo.

CONFORMITY

Each component entering our production facility in Porrentruy in the Swiss Jura is checked to ensure its dimensions, aesthetics, quality and interchangeability are irreproachable. This process is ensured thanks to an internal Development Team that engineers the various components. All of this occurs even before their production, thereby allowing an integrated process from the very start.

MECHANICAL MOVEMENT

A mechanical movement undergoes several stresses throughout its life. To ensure it remains functional and precise for as long as possible, Victorinox Swiss Army simulates watch wearing in its own quality office for every single manual and self-winding mechanism.

WATER RESISTANCE

Victorinox Swiss Army watch cases are hermetically sealed using high-grade rubber gaskets and screw-in casebacks to ensure that the movement isn't exposed to moisture or dust. The Quality Team carries out individual and real-time water-resistance and water-pressure tests to 100 meters on most of our watches, which is the brand's water resistance standard.

TEMPERATURE RESISTANCE

Heat chamber and humidity tests are performed on Victorinox Swiss Army watches to ensure perfect functioning in the tropics. Negative temperature tests are also conducted to be sure that the watch and, more specifically, the mechanism can withstand the climatic conditions encountered during winter sports.

CORROSION RESISTANCE

Perspiration, chlorine, soap, seawater, air pollution and other environmental elements can damage the watch components and materials. Victorinox Swiss Army performs a number of tests to ensure parts do not wear or lose mobility due to exposure to corrosive elements. Neutrality tests are also run on all components in contact with the skin, including cases, stainless steel bracelets, leather straps, etc.

UV RESISTANCE

Intense light can damage many materials used in watches, such as coatings, synthetic material, rubber and leather. Rigorous testing is performed to ensure the durability of these materials. For a material to be certified by the Quality Team, no signs of aging must occur during these tests.

TRACTION/TORSION RESISTANCE

The buckle on a leather strap and the clasp on a steel bracelet undergo constant use during the life of a watch. Victorinox Swiss Army submits complete watches to traction and torsion tests while special attention is paid to the attachment pins to ensure that accidental snagging will not bend or weaken them.

VIBRATION RESISTANCE

Everyday wrist movements – and sports activities such as cycling, jogging, riding and skiing – can affect the performance, the quality and the accuracy of a watch. To prevent this, special machines put Victorinox Swiss Army watches through more severe vibrations than they would ever experience; even on the most active wrist. If a watch or any of its components doesn't withstand this intense ordeal, the watch isn't certified.

SHOCK RESISTANCE

A number of severe shock tests are executed on Victorinox Swiss Army watches. Heavy impacts are reproduced in the lab – the equivalent of a severe impact with a wall, for example. Appropriate instruments later check that no mechanical damage occurred during these tests.

AGE RESISTANCE

Victorinox Swiss Army watches are function-tested to simulate the aging process – moving parts such as pushbuttons, crowns and bezels are turned and manipulated in a manner that reflects the equivalent of several years of normal use.

ABRASION RESISTANCE

The Quality Team conducts intensive abrasion tests, especially on the cases, bracelets and straps. This is to ensure that the watches can be worn in all situations and will not wear during their active life.

VISUAL AND MANUAL TESTING

In addition to this testing process, all watches are visually checked by a member of the Quality Team between each manufacturing step, ensuring overall quality based on our own Victorinox Swiss Army standards. If a watch does not pass inspection, it is checked and repaired. It can only go back to the production phase if it has passed the quality check.

COMPONENTS & MATERIALS

VICTORINOX SWISS ARMY SOURCES THE BEST COMPONENTS AND MATERIALS FOR ITS SWISS-MADE WATCHES. ROBUSTNESS, DURABILITY AND QUALITY ARE THE KEY REQUISITES.

STAINLESS STEEL

The 316L stainless steel alloy used in Victorinox Swiss Army cases and bracelets has strong anti-magnetic properties and is optimized for toughness and corrosion resistance. It is also a good choice for consumers allergic to nickel.

PVD (PHYSICAL VAPOR DEPOSITION)

PVD, a high-performance pollution-free and non-allergenic technology also used in the aeronautic industry, is widely used in watchmaking. The process involves putting a fine titanium coating on stainless steel by condensing a metal vapor in a partial vacuum, not through electrolytic or chemical processes.

Victorinox Swiss Army also employs a special process for its watches with gold accents: a thin layer of gold powder is added after treating the surface with PVD. This process provides a longer-lasting finish versus conventional plating.

SAPPHIRE VS. MINERAL CRYSTALS

Ninety-five percent of Victorinox Swiss Army watches are fitted with a scratch-resistant crystal that has been cut from a polished slice of solid sapphire. Each has a triple-coated anti-reflective treatment on the internal side for enhanced legibility. On the other hand, the Original collection is equipped with a mineral crystal, which offers better shock resistance.

MOTHER-OF-PEARL

Resilient and iridescent, mother-of-pearl is integrated in some Victorinox Swiss Army dial designs. It is produced inside the shells of certain mollusks. This is why each dial made of mother-of-pearl is unique.

BATTERIES

In compliance with global regulations and standards, Victorinox Swiss Army equips its quartz watches with mercury-free batteries. This is a positive step toward environmental sustainability with no effect on the watch precision or its efficiency.

LUMINESCENCE

This technology, branded under the name Super-LumiNova®, offers brightness in low-light conditions, thanks to a non-radioactive and nontoxic material like the tritium previously employed in the industry. Victorinox Swiss Army uses Super-LumiNova® for its highly functional attributes. It is applied on watch parts such as hands, numerals, bezel markers, etc.

MOVEMENTS

ETA – Over 200 years of experience in quality movement manufacturing. Equips mainly our mechanical watches (Valjoux) and some of our quartz chronographs.

RONDA – Progressive new movement features and responsive to customer needs. Used mainly in our 3-hand quartz watches.

In addition, Victorinox Swiss Army integrates exclusive Swiss-developed and Swiss made electronic modules to power watches like the Night Vision.

STRAPS & BRACELETS

DURABILITY, COMFORT AND QUALITY:
THESE ARE THE ESSENTIAL CRITERIA
THAT MOTIVATE VICTORINOX SWISS ARMY
IN ITS CHOICE OF STRAPS AND BRACELETS.

STRAPS & BRACELETS TECHNICAL SPECIFICATIONS

LEATHER

All Victorinox Swiss Army leather straps are specially cut, stitched and padded by expert craftspeople. Various ways of tanning provide a different touch and feel for the straps made of cow or calf leather. For most models, Victorinox Swiss Army uses ecologically tanned leather straps, giving a soft touch and upgraded comfort to the owner. We also make sure that the leather of all our straps does not come from any endangered species. It is always important to remember that colors and suppleness of leather are subject to change with time and exposure to external factors. Daily showers or swims are not recommended. If consumers live a very active lifestyle, especially one involving frequent exposure to saltwater and heavy perspiration, we recommend a steel bracelet or rubber strap.

STAINLESS STEEL

The 316L stainless steel alloy used in Victorinox Swiss Army bracelets has strong antimagnetic properties and is optimized for toughness and corrosion resistance. It is also a good choice for consumers allergic to nickel.

SBB (Straps & Bracelets Base)

Our easy-to-use SBB reference exists in printed and digitalformat. Updated every quarter, this practical database enables you to quickly find the strap your

MESH BRACELET

Stainless steel Milanese-type mesh bracelets are available for the Infantry collection. Flexible, thin and easy-to-adjust, the owner can adapt the bracelet size alone without using any tools.

PVD (PHYSICAL VAPOR DEPOSITION)

Victorinox Swiss Army uses PVD coatings and was one of the first watchmaking brands to apply the Black Ice PVD treatment color, setting a trend in the industry since then.

RUBBER

Victorinox Swiss Army uses genuine high-grade rubber for its straps (a natural material and extremely comfortable). The rubber has a silky finish and is easy to maintain with proper cleaning.

customer needs (metal bracelet, black leather, brown leather or black rubber strap) and look up compatible straps for every watch SKU launched since 2005.

BALLISTIC NYLON

For some models, Victorinox Swiss Army uses straps made of the ballistic nylon used for the most exclusive line of Victorinox travel gear. It provides the ultimate level of reliability and durability.

NATO INSPIRED STRAPS

NATO is the abbreviation for North Atlantic Treaty Organization and linked to the military universe. These straps are made in a single piece and woven with extra-resistant nylon fiber and cotton.

PARACORD STRAPS

Developed in collaboration with Naimakka, the paracord strap is original, innovative and unique, woven with highly resistant multi-strand nylon cord. The ideal companion for every adventure and expedition, the paracord strap can be unwoven and used for as many purposes as the wearer can possibly imagine.

CUSTOMER CARE

"COMMITMENT TO THE HIGHEST CUSTOMER SATISFACTION" IS AMONG THE MANY VICTORINOX ENTREPRENEURIAL VALUES. THIS VALUE IS THE UNIQUE AND ULTIMATE OBJECTIVE OF THE INTERNATIONAL CUSTOMER CARE TEAM IN SWITZERLAND, THE 70 GLOBAL SERVICE CENTERS AND 200 CUSTOMER CARE REPRESENTATIVES, WATCHMAKERS AND TECHNICIANS AROUND THE WORLD.

KEEPING A VICTORINOX SWISS ARMY WATCH LOOKING ITS BEST AND WORKING PERFECTLY REQUIRES REGULAR SERVICING. ONLY AUTHORIZED VICTORINOX SWISS ARMY CUSTOMER CARE CENTERS ARE ABLE TO ENSURE THE WORK MEETS OUR STANDARDS OF EXCELLENCE.

- Each watch sent to an authorized Victorinox Swiss Army (VSA) Customer Care Center is handled by a professional watchmaker.
- A diagnostic is performed and a detailed cost estimate is established, free of charge (for watches that are no longer under warranty), which is submitted to you before any repairs are carried out.
- Once you have accepted the cost estimate, our watchmakers will carry out all the necessary procedures, including the replacement of all worn or defective components. Victorinox Swiss Army guarantees the availability of spare parts for 10 years after production has ended.
- After each service, your watch will be returned to you with a warranty of one year on the work performed.

OUR MAINTENANCE SERVICES

CONFRONTING DAILY LIFE AS WELL AS SKIING, WATER-SPORTS AND SUDDEN VARIATIONS IN TEMPERATURE: A VICTORINOX WATCH REQUIRES CARE AND MAINTENANCE TO ENSURE ITS RELIABILITY AND ITS PROMISE OF EVERY-DAY ADVENTURE.

3 types of service are available at any of our authorized VSA Customer Care Centers:

- We strongly recommend a water-resistance test once a year, especially before vacations when your watch is under particular strain.
- Every 2 years: We recommend maintenance service. It will ensure that:
 - Your watch is completely water resistant (dismantling, replacing all the gaskets, cleaning the case, etc.)
 - The movement works correctly (changing the battery in a quartz watch, checking and adjusting a mechanical movement)
- Every 4 to 6 years: Depending on the model of your watch, your personal use and the local climate, we recommend a complete overhaul.
 - A complete overhaul of the movement (dismantling, checking the functions, replacing worn components, etc.)
 - A full check of water resistance, accuracy and functions

Additionally, an optional polishing service can be offered. This service is only available on steel products and aims to restore the original appearance of your watch as closely as possible, subject to the depth of scratches.

OUR ADVICE FOR TAKING CARE OF YOUR VICTORINOX SWISS ARMY WATCH

LIKE ALL QUALITY PRODUCTS, VICTORINOX SWISS ARMY WATCHES REQUIRE ATTENTION AND CARE, FOLLOWING A FEW BASIC RECOMMENDATIONS THAT WILL PROTECT YOUR WATCH OVER TIME.

WATER RESISTANCE

To prevent any infiltration of water or dust, all watches (quartz or automatic) should have their water resistance checked every year by an authorized VSA Service Center. We recommend proceeding with this test ideally before summertime or before going on vacation, as your watch is particularly exposed at those times to water pressure and strong variations of temperature.

MECHANICAL MOVEMENTS

An automatic or hand-wound movement is a miniaturized engine running 24 hours a day, 7 days a week. To sustain its accuracy (between -2 and +20 seconds per day), it needs regular maintenance and checking. We recommend that customers have the movement serviced every 4 to 6 years.

CONDENSATION

A sudden change of temperature may cause condensation to appear under the crystal. This doesn't affect the watch's functions and will soon disappear on its own. Nevertheless, it indicates a water-resistance weakness. Our recommendation is to consult an authorized VSA Customer Care Center.

CLEANING

To preserve the attractive appearance of the watch, regularly clean the case and the steel or gold bracelet in slightly soapy water, then rinse in fresh water and dry with a soft cloth. Leather is a noble, living material. When it gets wet, it tends to lose its suppleness and color. If possible, avoid frequent immersion in water and daily showers. When the watch has been in saltwater, it should be carefully rinsed with clear water and dried as soon as possible.

SHOCKS

Avoid impact, drops and repeated friction that could abrade the metal and affect the watch mechanism. We recommend that you take off your watch while playing tennis, squash or golf. Also avoid contact with chemical products, exposure to high temperatures and strong magnetic fields.

FUNCTIONS & TECHNICAL SPECIFICATIONS

FUNCTIONS	86
TECHNICAL SPECIFICATIONS	90
TIMEPIECE PICTOGRAMS	95

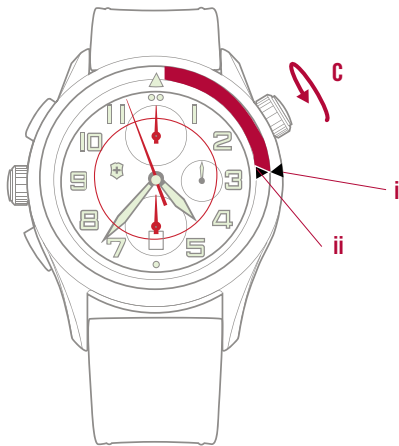

FUNCTIONS

TACHYMETER

The tachymeter allows you to measure the average speed of an object moving at constant speed. Start the chronograph and stop it after a certain distance covered (1 km). The chronograph hand indicates a figure on the tachymeter scale corresponding to the speed in km/h.

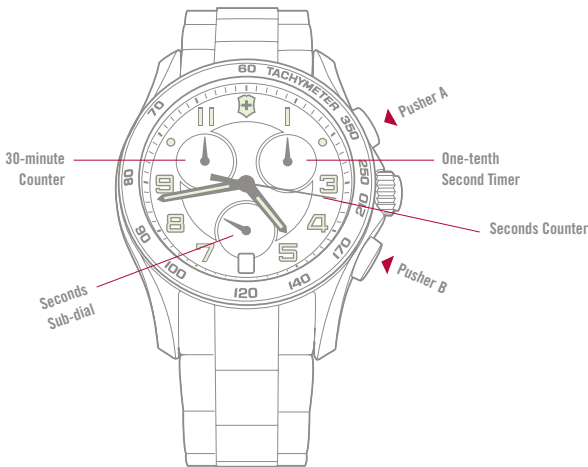

SLIDE RULE

- i** = Fixed units of measurement (engraved on the watch case)
- ii** = Moving inner bezel (slide rule)
- C** = Screw to rotate the moving inner bezel (ii)

The red index 10 is always the starting point for your conversions/calculations.

EXAMPLE: How to multiply 8 x 12:

Set the inner ring (ii) using the screw (C) with the red index 10 at 80 (for 8) on the outer ring (i).
Find 12 on the inner ring (i).
Look up 96 on the outer ring (i), aligned to 12 on the inner ring (ii), which is the result of 8 x 12.

USE OF THE CHRONOGRAPH

MEASUREMENT OF ELAPSED TIME

1. Press pusher A to start the chronograph.
2. Press pusher A again to stop the chronograph.
3. Once the timing operation has been completed, press pusher B to reset the chronograph and totalizer hands back to zero.

ADD FUNCTION

Additional timings: Each time you stop the counter, the time is stopped and does not take into consideration the elapsed time:

1. Press pusher A to start the chronograph.
2. Press pusher A to stop the chronograph and read the time.
3. Press pusher A again to continue timing at the place where timing stopped ... and so on.
4. Once the timing operation has been completed, press pusher B to reset the chronograph and totalizer hands back to zero.

SPLIT FUNCTION

The split time function is used to display an intermediate time while continuing timing. This function is not available for mechanical chronographs:

1. Press pusher A to start the chronograph.
2. Press pusher B to display the first split time.
NOTE: The chronograph will continue to measure time while you are reading the time.
3. Press pusher B again to continue timing.
NOTE: Chronograph hands automatically advance to the current time being measured.
4. Press pusher B again to read off the next split time.
NOTE: Repeat Step 4 until all desired split times have been recorded.
5. Press pusher A to end timing.
6. Press pusher B to reset the chronograph and totalizer hands back to zero.

HOW TO USE THE NIGHT VISION

1. DIAL ILLUMINATION MODE

One quick push of the pusher activates the soft blue LED light for 6 seconds. To deactivate, press the pusher once.

Note: During the Dial Illumination Mode, please note that the other lighting functions (2-3-4) cannot be activated.

2. EXTENDED LIGHT MODE

Two quick pushes of the pusher activate the white LED located at 12 o'clock and incorporated into the bracelet. Light will automatically deactivate after 2 minutes, or you can turn light off by pressing the pusher once.

3. SIGNAL MODE

Three quick pushes of the pusher will cause the white LED light to strobe (150 pulses/min.) for 2 minutes. To deactivate prior to 2 minutes, press pusher once.

4. SOS SIGNAL MODE

Holding the pusher for 5 seconds will activate an intensified SOS light signal. To deactivate, press the pusher for 5 seconds.

5. LOCATOR MODE

Red LED locator beacon is positioned at the 6 o'clock marker and blinks once every 10 seconds – an easy way to find your watch. Five pushes of the pusher will deactivate the blinking of the red LED light.

6. BATTERY END-OF-LIFE MODE (EOL)

Red LED locator beacon positioned at the 6 o'clock marker will flash 3 times every 10 seconds, indicating lighting batteries should be changed. The deactivation of the Locator Mode (point 5) does not have any impact on the Battery End-of-Life Mode.

WHAT IS THE DIFFERENCE BETWEEN A COUNTDOWN AND A COUNT-UP FUNCTION?

COUNT-UP

When a scale, on a bezel for example, goes from 5 to 60 (clockwise incrementation), we can use the bezel as a counter to count up to 60 minutes. To do so, simply turn the bezel counterclockwise to align the triangle of the scale with the minute hand of the watch. To know how many minutes have passed by, simply look at the number on the bezel that is indicated by the minute hand.

COUNTDOWN

When the scale on the bezel starts at 55 on the right (counterclockwise incrementation), we may use the bezel as a timer to count down from 60 minutes. To do so, simply turn the bezel clockwise to align the number of minutes to be counted down with the minute hand of the watch. To know how many minutes are left to be counted down, simply look at the number on the bezel that is indicated by the minute hand. When the minute hand reaches the triangle on the bezel, the countdown is finished.
